

Delivering the Most Advanced Approach to Digital Process Automation

K2 and UiPath Partnership Enables Full Lifecycle Business Automation

K2, the industry's leading digital process automation (DPA) platform, has partnered with UiPath, a global leader in RPA technology, to transform the meaning of true business automation. K2's low-code DPA platform allows organizations to quickly build and deploy powerful process applications, and with new UiPath integration, K2 can now trigger UiPath robots to complete repetitive, manual tasks without requiring human intervention.

The native integration between K2 and UiPath allows for the flexibility you need to use robots to start or update inflight K2 processes or have K2 call a robot to fully automate tasks. This full life-cycle approach allows for humans and robots to work together seamlessly, in turn reducing costs and improving accuracy, compliance and agility.

Using K2 and UiPath, organizations can:

- ✓ **Accelerate digital transformation.** Build and deploy process applications rapidly to streamline business efficiency.
- ✓ **Increase accuracy.** By working together, humans and robots can implement a system of checks and balances. UiPath robots can reduce human error, while K2 can ensure robots don't fail by getting the right person involved at the right time.
- ✓ **Focus on high-value projects.** By automating repetitive, manual tasks, teams can instead focus their efforts on projects that will provide real business value.
- ✓ **Modernize legacy systems.** Breath new life into legacy systems by implementing modern UI practices that can increase both employee and customer satisfaction.

K2 customers can:

- Enable IT teams to streamline process application development.
- Empower business users to automate workflows with drag-and-drop tooling.
- Maintain control of their processes to ensure security and integrity.

UiPath customers can:

- Automate repetitive, manual tasks.
- Manage interactions and exceptions.
- Improve process visibility and exception handling.

Together, customers can:

- Benefit from the best of both worlds to achieve end-to-end process automation.
- Focus on more high-value projects.
- Work together seamlessly to transform their processes and their business.

Build Faster. Automate Smarter.
